

WINSTONE
Windows & Door Solutions

The company Winstone, established in 2012, has been in action producing solutions to the PVC door, window and aluminium frame systems.

With its young and dynamic structure, Winstone makes marketing and sales, including the famous and quality brands in Turkey and in the World in the construction products group.

Winstone improves itself in terms of quality and customer satisfaction, to make special production in its entrepreneurship on the brass barrel production (cylinder) and sales for the leader companies in Turkey.

Winstone, not losing its belief and interest since its establishment

- *Solutions without any problem*
- *Sensible, transparent and balanced working*
- *Respecting the time of customer*
- *Shaping whole structures Still continues on top level, and not compromising its quality service.*

As a result creating company culture, we have best wishes to create the long term relationship with our employees and business partners.

FS500

Frame and Facade Silicone

FS500 is one-part, neutral curing, low modulus, low odour silicone sealant suitable for perimeter joint sealing applications with high movement capability. It has excellent adhesion to most porous substrates including masonry, brick, aluminium, PVC-U, polycarbonate, polyacrylate, wood, glass and glazed surfaces.

Advantages

- Movement capability: up to 50%
- Long-term resistance to weathering, ageing and UV
- Low modulus formulation ensures minimum strain at joint faces
- Neutral cure: low odour and non-corrosive

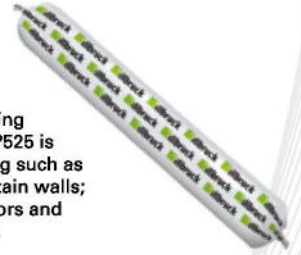

SP525

Hybrid Facade Sealant

SP525 is a one component, non-sagging sealant based on hybrid polymers. SP525 is recommended for construction sealing such as joints in facades, rainscreens and curtain walls; perimeter joints around windows, doors and rooflights; and high movement joints.

Advantages

- Suitable for high heat and humid application conditions
- Good resistance to UV, ageing and weathering
- Fast cure compared to similar products- up to 2.5 mm in the first day
- Movement accommodation factor: 25%
- Low odour and non-corrosive
- Solvent and isocyanate free
- Compatible with most common construction materials
- Can be overpainted with water based paints. Other types of paint should be discussed with the technical department.

SP350

Fix & Seal High Tack

SP350 has been developed to bond materials to floor, wall and ceiling, where the extremely high initial strength of the product is very useful for this high performance adhesive.

Advantages

- High initial grab and rapid development of final bond
- Formulation is solvent free, very low odour, and chemically neutral
- Instant grab can minimise the need for additional clamping or other mechanical supports
- Good resistance to light, weather and ageing - suitable for internal and external applications

TP610

Compriband 610

TP610 is an impregnated foam tape which can be used for weather tight sealing of perimeter joints around windows and doors.

Advantages

- Maintains the energy rating of the window (when used in conjunction with FM330)
- Driving rain tightness to 600 Pa
- Meets CWCT test for site water tightness (TN41)
- Breathable
- All weather installation
- UV-resistant

ME508

Duo Membrane EW/F

Advantages

- Used for sealing window connection joints, particularly where wet plaster will be applied.
- Strong and reliable self-adhesive, allowing bonding to virtually any substrate (eg masonry, concrete, PVC, metal, wood, and all usual insulation materials (EPS, XPS, PUR rigid foam), making application fast and simple.
- Suitable for internal and external use due to variable sd, however, ideally used internally as an airtight seal in combination with ME501 Duo Window Membrane HD as an external weathertight seal.
- Complies with the "inside tighter than outside" principle in order to facilitate moisture and vapour control.

ME220 + OT015

EPDM Membrane

ME220 EPDM membrane is used for weather sealing the connecting joint between a window or a façade & an adjacent structure, or to provide an internal air-tight barrier in a similar detail.

Advantages

- High resistance to mechanical damage
- Excellent movement capability in both transverse and longitudinal direction with excellent material recovery after elongation
- Excellent weathering, ageing and UV radiation resistance
- Excellent moisture vapour barrier

MOTO Schutz

**FOR EXTRA SAFETY AND PROTECTION, UNBREAKABLE CHAIN LOCK.
SPECIALLY DESIGNED FOR MOTORBIKES AND BICYCLES**

- ✓ Special Alloy Manganese and Boron element reinforced chain
- ✓ Dimensions 150cm, 180cm, 200cm
- ✓ 61 mm PVC coated anti-cut Padlock
- ✓ Resistance to cutting with Iron scissors and Hacksaw
- ✓ Resistance to breakage by cooling with spray
- ✓ Possessing high resistance to cutting with metal grinding machine
- ✓ Against corrosion max. Protective Galvanized Surface Coating
- ✓ Top segment protection case made of durable special design fabric
- ✓ Protective carrying case
- ✓ 4/5 kg weight

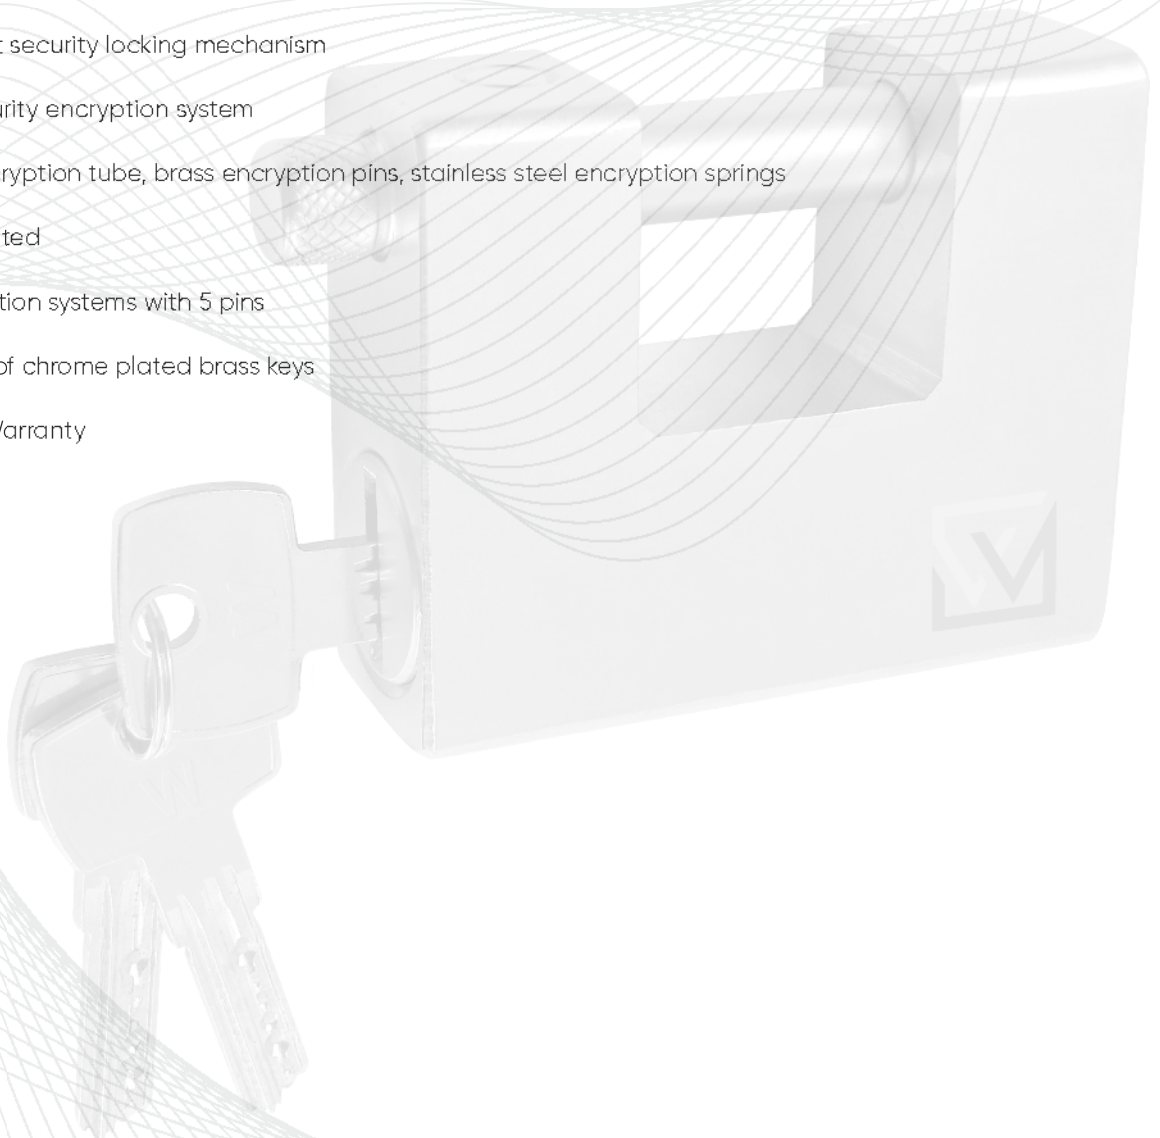

WINSTONE
Window & Door Solutions

PADLOCK WITH STEEL SLIDING BAR

- ✓ Steel Body reinforced against puncture
- ✓ Unbreakable steel lock bar
- ✓ Two point security locking mechanism
- ✓ High security encryption system
- ✓ Brass encryption tube, brass encryption pins, stainless steel encryption springs
- ✓ Nickel plated
- ✓ Combination systems with 5 pins
- ✓ 3 pieces of chrome plated brass keys
- ✓ 5 Years Warranty
